

# **YARDCHECK 360**

## **WIRELESS GATE READER TYRE PRESSURE MONITORING SYSTEM**

### **Identify problem tyres before they go out on the road.**

The YardCheck 360™ Wireless Gate Reader TMS creates a secure wireless data network around the facility to transfer tyre pressure and temperature data from the trailers in the yard to the cloud.

- Tire pressures and temperatures from untethered trailers are updated daily
- Historical data and alarms while trailers are out of the yard are stored and transmitted when trailer enters the wireless network
- Create scheduled and on-demand reports to simplify tire maintenance needs
