

Increased Filter Life Means Decreased Maintenance Downtime

Air filter life is directly related to the amount of debris ingested through an engine's air intake. Installing a Sy-Klone Series 9000® Air Precleaner as the first stage of an air intake system prevents the majority of heavier-than-air particles from entering the system. This results in longer air filter life, more efficient engine performance and decreased maintenance expenses.

You'll be in good company with Caterpillar®, Volvo, John Deere®, Mack®, Bomag®, Kawasaki, Doosan, the US Military and more!*

Our products are featured by over 150 OEMs, under the Series 9000® name and private labels (such as Caterpillar's "Turbine PreCleaner" and John Deere's "Rotary Ejector.") The Series 9000 is just as powerful as a retrofit solution; now you too can harness the power of a Sy-Klone!

Air Flow Range: With eight models in sizes from 2" to 8", we can handle 10 - 1,800 CFM (and much higher with multiple-unit installations - contact SyKlone for assistance)

Mounting & Equipment Types: Mounts on all vertical and horizontal air cleaner housings, on all machines, replacing those with tube body systems or internal precleaners

Precleaner Maintenance: Self-cleaning and maintenance-free

Recommended Uses: Off-road conditions, construction, mining, forestry, landfills, farming, military, and more

Debris Types: Expels all types of mixed debris, including mud, snow, rain, leaves, sawdust, chaff, and dust. Heavier debris requires additional heavy debris screen

How it works:

Step 1:

Air enters the underside of the dome through screened louvers, which prevents clogging by blocking any particles larger than the ejection slot from entering the unit.

Step 2:

Curved particle-accelerator blades slam air and dirt up against the sidewall

Step 3:

Strakes along the interior surface move heavier-than-air debris towards the ejection slot

Step 4:

Clean air continues to swirl down into the engine air inlet pipe

Benefits:

Extends air filter life

Handles all kinds of mixed debris, including mud, snow, rain, leaves, sawdust, chaff, and dust

Lowers cost per operating hour by reducing parts, labor, and downtime costs.

Reduces downtime

Extends engine life

Lowers air restriction, which increases useable horsepower and improves fuel efficiency

Claims against our limited lifetime warranty are practically non-existent

Rugged engineered polymer construction gives you the strength of steel (without the corrosion) at the cost of plastic

We leave our competition in the DUST... literally!

**INGESTIVE
precleaners mean
INCREASED
maintenance!**

Dust Ejector:

Tubes can clog, disabling the precleaner. Less effective on mixed debris. Tubes can melt due to exhaust gas. Not accessible for inspection or cleaning.

Dust Bowl:

Can crack. Can rust. Can cloud, leading to inability to service. Requires dumping, and shortens filter life when full. Not effective on mixed debris.

Internal Precleaner:

The valve can tear, crack, remain open, or fall off, causing precleaner failure and shortened air filter life. Often painted in the open position, disabling function. If dump valve is off or not working, debris can be sucked in through the dump valve port.
