

Make cyclists more aware with audio and visual system

Attract maximum attention from cyclists and pedestrians using our all-in-one high intensity LED and speaker system. Make cyclists and pedestrians more aware of your presence, minimising the risk of accidents.

Be more visible on the road

Make cyclists more aware of your presence, especially when turning

Combine audio & visuals

Get road users attention visibly and audibly when you need it

Prevent turning accidents

Reduce the risk of vehicle incidents when turning left

Enviro-friendly system

A Simple and effective solution that's friendly to the environment

The amount of accidents taking place with large vehicles in city centres continues to grow, with a high percentage of left-turning accidents causing fatalities.

By improving the visibility of your vehicle when making difficult manoeuvres we can reduce the chance of accidents on busy roads.

TurnAlarm is a cost effective and environmentally friendly way of making cyclists and pedestrians more aware of your presence on the road.

The TurnAlarm system is a visual and audible alarm warning system. Inactive during normal driving, the system only activates when turning left and/or right.

During a vehicle manoeuvre the high intensity LEDs will flash whilst the built-in speaker will beep to gain attention.

By offering both light and sound, you reduce the risk of missing cyclists and pedestrians that may not be looking, or possibly using headphones whilst travelling.

TurnAlarm
AUDIBLE VISUAL AWARENESS

“Reduce the risk of accidents by improving awareness when making difficult manoeuvres”

Works well with...

RoHS

Saltspray

VT TurnSensor

Use Ultrasonic sensors to detect approaching cyclists before they become a danger
